Doc 34 (program RELATIVE): amendment 1 (dated additive, 2026-11-12)

Applied by the main loop on 2026-11-12, after program QSG-NC was decided (`35_qsg_nc.md`, v1.0, sha256 74a331a8...5fe6b4). Doc 34 itself stays byte-unchanged (sha256 e6d4fc7f...008a04); this file stands beside it. The quoted lines are copied verbatim from doc 35, sections 2.4 and 7.2. Nothing here is a result; nothing was posted or sent.

1. What it concerns

Doc 34 quotes the licensed sentence of the PRE-Q verifier (its line 279). The second half of that sentence, on the restriction of the Bell rule to pairs with a gregarious member, is the state of the record on 2026-11-11. Program QSG-NC has since decided that question on stated classes and has found fixed-level objects that the sentence could not see.

2. The correction (doc 35, section 7.2, item 6, verbatim)

> The PRE-Q verifier's licensed sentence: its clause on the gregarious-pair restriction needs the depth rider and repair H20 wherever it travels (section 2.4). The PRE-Q report's comparison row on item (6) of the second party's theorem carries a stale status word (repair H28).

3. The two riders that travel with the sentence from now on (verbatim)

Depth rider (the judge of program QSG-NC, first ruling):

> The PRE-Q verifier's licensed sentence ("no non-commutative solution was found that survives level 4") stays true as worded and needs a depth rider from now on: interior solutions of levels 4, 5 and 6 are on file; each is born at its own level and dies one level later. PRE-Q's finite-field regressions extended interior level-3 solutions only and could not see an object whose restriction to level 3 is of boundary type (a coverage gap, no error).

Repair H20 (the practitioner steelman of program QSG-NC), to be read before the sentence:

> The second half of the sentence below (the clause on the gregarious-pair restriction and the typed outcome with the words "no SURVIVOR") is the state of the PRE-Q record on 2026-11-11. For the gregarious-pair restriction the statement of record is now section 3, and the fixed-level family of section 3.5, which meets the registered letter at levels 5 and 6, was found after that date.

(The sections that this repair names are sections 3 and 3.5 of the note `35a_QSG_NC_note.md`.)

4. Where the statements of record now stand

- For the Bell rule as the anchor paper prints it: Theorem Q, unchanged (the certificate-rigor leg of program QSG-NC re-derived its proof line by line and confirmed it).

- For the restriction to pairs with a gregarious member: the gate's licensed sentence in its travelling form, `35_qsg_nc.md` section 2.1, with the note `35a_QSG_NC_note.md` section 3.
- The riders of doc 34 are unchanged: NOTE grade, one approach (causal sets), the rules of one paper as read, no sentence about the continuum or about gravity in our world.
